

Case Study

Distribution Centre Security Deployment

Project Specifics

Project Duration:

 3 months

Sector:

 Distribution and Logistics

Services Provided:

 Full fixed system including CCTV, Intruder, Fire and Access Control, 24/7 response, Security Guards.

Our technology was part of a comprehensive security and infrastructure deployment for a newly established logistics and distribution centre.

The project required a combination of temporary site protection, permanent security infrastructure and rapid project delivery to meet demanding operational deadlines.

The Problem:

A leading international logistics operator was preparing to launch a new distribution centre and required a complete security solution within a highly compressed timeframe.

Planning delays had significantly reduced the available installation window, creating pressure to deliver a fully operational security infrastructure before the facility became operational.

The site also required robust perimeter protection during construction and fit-out phases, alongside a permanent integrated security solution capable of supporting ongoing logistics operations.

Case Study

The Solution:

Following a detailed site assessment, a combination of temporary and permanent security measures was deployed to meet the project's tight timescales and operational requirements.

Sentinel Security Pods and 24/7 security personnel provided immediate perimeter protection during the construction phase. This was complemented by the installation of a fully integrated security infrastructure, including CCTV, intruder detection, fire systems, access control and automated gate solutions.

The deployment was completed within an accelerated programme to ensure the facility could become operational as quickly as possible.

Outcome

The project was delivered ahead of schedule despite a compressed delivery timeframe.

The integrated solution provided comprehensive site protection, controlled access management and enhanced operational oversight, allowing the facility to commence operations earlier than planned while maintaining high security standards throughout the project lifecycle.

“

We have been delighted with our new partnership. They have consistently exceeded our expectations while providing a world-class solution to our needs”
