

Case Study

Industrial Refurbishment Site Protection Project

Project Specifics

Project Duration:

 9 months

Sector:

 Industrial Design

Services Provided:

 CCTV, Solar CCTV Towers,
Sentinel Pods to utilise their
Fire Detection

Our technology was deployed to support a major industrial refurbishment project requiring both external site security and internal asset protection throughout the construction programme.

The project presented several operational challenges, including limited power availability, restricted working space and the need for rapid deployment to address local security concerns.

The Problem:

A large industrial refurbishment project required comprehensive protection for both external compounds and internal works.

Limited access to mains power and confined working areas restricted the use of traditional security infrastructure, while ongoing reports of site intrusions in the surrounding area increased the need for immediate and reliable protection.

The client required a flexible solution capable of protecting assets, monitoring environmental risks and adapting as the project progressed.

Case Study

The Solution:

Following a detailed site assessment, a combination of solar-powered CCTV towers and Sentinel Pod technology was deployed to secure the site perimeter and external compound.

As the refurbishment progressed, additional monitoring capabilities including fire, heat, CO₂ and wireless water detection were introduced within the building to protect ongoing works and newly installed infrastructure.

The complete solution was deployed within 24 hours, providing immediate protection across both internal and external areas.

Outcome

The project achieved comprehensive site protection throughout the refurbishment programme despite power and access constraints.

The integrated solution provided confidence that both external assets and internal works remained protected, while supporting a safe and secure working environment for all site personnel.

“

I was delighted with the quick response coupled with their time and cost saving solutions and look forward to working with them on our next project”
